E-waste Disposal industry refers to the work or business contains the collecting, transporting, re-using or processing of e-waste.

SCOPE OF THE REPORT:

This report focuses on the E-waste Disposal in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. As the electronics industry is developing rapidly worldwide, the volume of electronic equipment generated is increasing in amazing speed, as well as the e-waste. These e-wastes contain lot of valuable materials or equipment that can be recycled. And e-waste also contains toxic and hazardous materials including mercury, lead, cadmium, beryllium, chromium, and chemical flame retardants, which have the potential to leach into our soil and water.

Currently, the volume of e-waste that can be recycled properly is less than 20% of the total volume of e-waste generated worldwide each year. There is still quite a lot of work should be done to promote the development of e-waste recycling industry.

Growing numbers of governments are beginning to make laws or taking more strict measures to restrict the incineration or fill of e-waste and try to ban undocumented workshops of e-waste recycling.

The worldwide market for E-waste Disposal is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
