Abstracts

Electric Double Layer Capacitor is electrochemical capacitors which energy storage predominant is achieved by Double-layer capacitance. Double-layer capacitance – electrostatic storage of the electrical energy achieved by separation of charge in a Helmholtz double layer is at the interface between the surface of a conductor electrode and an electrolytic solution electrolyte.

SCOPE OF THE REPORT:

This report focuses on the Electric Double Layer Capacitor in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Along with the development of Chinese domestic Industrial technology, Chinese EDLC have been made a lot of progress, but it also has a long way to be advanced in the world, especially in high-end products. Otherwise, most of Chinese companies are rather small, compared to other countries' companies.

However, the high cost of the systems and effectiveness of the device are the major factors hindering the growth of this market. In the future, the manufacturers who want to occupy the market must depend on market mechanism reform, core technology improvement, manufacturing equipment innovation, brand establishment and customer training and service enhancement.

The worldwide market for Electric Double Layer Capacitor is expected to grow at a CAGR of roughly 24.9% over the next five years, will reach 7280 million US\$ in 2023, from 1920 million US\$ in 2017, according to a new GIR (Global Info Research) study.
