Abstracts

In this report, the new energy vehicle primarily includes the plug-in hybrid electric vehicle (PHEV), battery electric vehicle (BEV), fuel cell vehicle and so on.

Electric Vehicle Drive Motors is a new kind motor, it is more like one kind motor that it collects the function of electric motor and generator, it can provide power from the battery and it can also recycle the power from vehicle putting on the brake, it more meets the idea of the new energy vehicles and societal need.

As we all know that the battery is the most important section of the new energy vehicle, and currently, the battery exist the problem of the storage capacity but it occupies a large part of the costs and space of the new energy vehicles, so the Electric Vehicle Drive Motors needs higher technology to improve the efficiency and decrease the volume to satisfy the new energy vehicle's demand.

The Specifications include the material, rotating speed, current manner, power and so on, the main components are stator and rotor, these two components control the quality of the drive motor, it is the work efficiency. Because the new energy vehicle needs the battery to provide power, the power and the magnetic field may influent each other, so the Specifications needs higher.
