Abstracts

Electrical insulation papers are used as an insulator in many electrical and electronic applications due to its low electric conductive properties. Typically, cellulose is employed as an insulating material due to its excellent insulation properties. Previously, materials such as wood, rubber, and cotton were utilized as electrical insulators. Electrical insulating papers have high mechanical strength, reduced size, and improved resistance properties. The usage of high purity chemical in manufacturing makes them perfect for insulating electrical machines. Presently, these papers are witnessing an increased usage due to the increasing demand for effective insulating products. Electrical insulation papers in this report is not contain presspaper.

SCOPE OF THE REPORT:

This report focuses on the Electrical Insulation Paper in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. The market is majorly driven by the increasing demand from the electrical, and electronics industry verticals. The electrical insulation paper market is expanding significantly due to increasing applications in cable insulation, capacitor insulation, conductor insulation, transformer insulation, electrical bushings, and transformer winding. Moreover, the market is growing due to the increasing industrialization and urbanization in developing economies.

In developing economies, a surge in the electrical installation activities, focus on the development of rural areas, and improved electricity regulations are contributing to the overall expansion of the market. Increasing number of innovations toward the miniaturization of electrical equipment is also demanding the usage of electrical

insulation paper. Furthermore, increasing innovations for the improvisation of heat resistance of these insulation papers are creating a high adoption rate across various other applications, thereby driving the overall market.

The leading companies own the advantages on better performance, more abundant product's types, better technical and impeccable after-sales service. Consequently, they take the majority of the market share of high-end market. Looking to the future years, the slow downward price trend in recent years will maintain. As competition intensifies, prices gap between different brands will go narrowing. Similarly, there will be fluctuation in gross margin.

The worldwide market for Electrical Insulation Paper is expected to grow at a CAGR of roughly 5.3% over the next five years, will reach 1410 million US\$ in 2023, from 1040 million US\$ in 2017, according to a new GIR (Global Info Research) study.
