Fatigue machine is a type of testing equipment used to determine the fatigue life and/or the danger point, i.e. the location of failure of a test-piece subjected to a prescribed sequence of stress amplitude.

SCOPE OF THE REPORT:

This report focuses on the Fatigue Machine in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

As global overall economic downward trend in the past few years, and international industry situation is complicated, in the next few years there will be many uncertainties for fatigue machine industry. Attracted by the market potential, more and more companies have entered into fatigue machine industry, the competition between manufacturers at home and abroad is fierce for the time being.

Fatigue machine demand has a certain space, but basically showing the scarcity of high-end products due to technology barrier and excess capacity of low-end products. There is increasing demand for high-end products.

Despite the presence of competition problems, due to the clear global economy recovery trend and industry profits, investors are still optimistic about this area; there will be more investments to enter the field.

The worldwide market for Fatigue Machine is expected to grow at a CAGR of roughly 2.5% over the next five years, will reach 360 million US\$ in 2023, from 310 million US\$ in 2017, according to a new GIR (Global Info Research) study.
