Abstracts

Fiber Optic is a cable containing one or more optical fibers that are used to carry light. The optical fiber elements are typically individually coated with plastic layers and contained in a protective tube suitable for the environment where the cable will be deployed.

SCOPE OF THE REPORT:

This report focuses on the Fiber Optics in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. China is one of the largest manufacturing bases and the largest consumption area of Fiber Optics industry, over 55% Fiber Optics are manufactured in this region. Factors in near-term demand include continuation of the FTTH construction effort. Although the FTTH projects of China Telecom and China Unicom already have passed a large percentage of the homes in China's major cities, the government's requirement to improve broadband coverage in rural areas may be a factor keeping demand for optical cable at high levels after 2016.

Although sales of Fiber Optics brought a lot of opportunities, the study group recommends the new entrants just having money but without technical advantage and downstream support do not to enter into the Fiber Optics field.

The worldwide market for Fiber Optics is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
