## **SCOPE OF THE REPORT:**

This report focuses on the Fine Pixel Pitch LED Displays in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. The market for fine-pitch LED display has now entered its growth period since the concept was introduced by Leyard in 2012 and is expanding rapidly in scale. The booming downstream market and further technological advances continue to drive the consumption of chips and packages for fine-pitch LED displays.

The fine pixel pitch LED displays market is also fueled by the high flexibility offered by the products and the declining cost of the technology.

On the flip side, the widespread adoption of fine pixel pitch LED displays is challenged by their high initial cost. "We have found that small pixel pitch LED displays cost at least three times more compared to other display technologies such as DLP rear projection and LCD," the author states. However, TMR predicts that the growing competition in the market and continuous research and development in the field is projected to bring down the cost of fine pixel pitch LED displays in the coming years.

The worldwide market for Fine Pixel Pitch LED Displays is expected to grow at a CAGR of roughly 28.8% over the next five years, will reach 5050 million US\$ in 2023, from 1110 million US\$ in 2017, according to a new GIR (Global Info Research) study.
