Abstracts

A fish finder is an instrument used to locate fish underwater by detecting reflected pulses of sound energy, as in sonar. A modern fish finder displays measurements of reflected sound on a graphical display, allowing an operator to interpret information to locate schools of fish, underwater debris, and the bottom of body of water. Fish finder instruments are used both by sport and commercial fishermen.

SCOPE OF THE REPORT:

This report focuses on the Fish Finders in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. In the coming years there is an increasing demand for Fish Finders in the regions of North America and Europe that is expected to drive the market for more advanced Fish Finders. Increasing of recreational fields expenditures, more-intense competition, launches in introducing new products, retrofitting and renovation of old technology, increasing adoption of Fish Finders will drive growth in North America and Europe markets.

The impact on the cost and availability of raw materials and certain components is uncertain due to potential supply changes. The costs of raw materials have a significant impact on the level of expenses. If the prices of raw materials and related factors such as energy prices increase, and if new companies cannot pass those price increases on to customers, their results of operations and financial condition would suffer.

The worldwide market for Fish Finders is expected to grow at a CAGR of roughly 6.0% over the next five years, will reach 370 million US\$ in 2023, from 260 million US\$ in
