Abstracts

A flame detector is a sensor designed to detect and respond to the presence of a flame or fire. Responses to a detected flame depend on the installation, but can include sounding an alarm, deactivating a fuel line (such as a propane or a natural gas line), and activating a fire suppression system.

SCOPE OF THE REPORT:

This report focuses on the Flame Detectors in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

For industry structure analysis, the Flame Detectors industry is fragmented. A variety of manufacturers ranging from large multinational corporations to small privately owned companies compete in this industry. The top five producers account for about 20.50% of the revenue market. Regionally, Europe is the biggest production value area of valves, also the leader in the whole Flame Detectors industry.
China occupied 26.33% of the production market in 2015. It is followed by Europe and USA, which respectively have around 24.16% and 19.50% of the global total industry. Other countries have a small amount of production. Geographically, Europe was the largest consumption market in the world, which took about 26.65% of the global consumption value in 2015. USA shared 21.57% of global total.
For forecast, the global Flame Detectors revenue would keep increasing with annual growth rate with 3~5%, and a little higher speed in China. We tend to believe that this industry still has a bright future, considering the current demand of Flame Detectors. As for product prices, the slow downward trend in recent years will continue in the next few
