## Abstracts

A flight simulator is a device that artificially re-creates aircraft flight and the environment in which it flies, for pilot training, design, or other purposes. It includes replicating the equations that govern how aircraft fly, how they react to applications of flight controls, the effects of other aircraft systems, and how the aircraft reacts to external factors such as air density, turbulence, wind shear, cloud, precipitation, etc.

### SCOPE OF THE REPORT:

This report focuses on the Flight Simulator in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Flight simulators are now extensively used in the aviation industry for design and development and the training of air crew for both civil and military aircraft. In the coming years there is forecasted to be stable demand scale for flight simulator worldwide, especially in emerging market such as China and India, which is expected to drive the industry development of flight simulator. It is forecasted that the global market of flight simulator will reach as high as 4099 Million USD by the end of 2022.
