Fumed silica (CAS number 112945-52-5), also known as pyrogenic silica, is white, synthetic, amorphous silicon dioxide (SiO<sub>2</sub>) in powder form, made by flame hydrolysis of silicon compounds.

### SCOPE OF THE REPORT:

This report focuses on the Fumed Silica in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. In consumption market, the global sales value increases with the 3.53% average growth rate. USA and Europe are the mainly consumption regions due to the bigger demand of downstream applications. Fumed silica has light density, which would increase the cost of transportation. So the main market players of fumed silica set up production plants in main consumption regions to save cost of transportation.

We tend to believe this industry is a rising industry, and the consumption increasing degree will show a smooth growth curve. And the price presents fluctuation trend according to the economy development status. Also, there will be fluctuation in gross margin.

The worldwide market for Fumed Silica is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
