Abstracts

GaN has superior properties than silicon such as high breakdown voltage and saturation velocity. The bandgap in GaN is almost thrice the bandgap of silicon. Thus, GaN has the ability to improve power conversion efficiencies, raise power density levels, extend battery lives, and accelerate switching speeds in different end-user segments such as consumer electronics products, telecommunications hardware, electric vehicles, or domestic appliances.

SCOPE OF THE REPORT:

This report focuses on the GaN RF Devices in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa.
