Abstracts

Garden Pesticides are substances meant for attracting, seducing, and then destroying any pest in the garden, which in general protect plants from damaging influences such as weeds, fungi, or insects. Garden pesticides include herbicides (which kill plants), insecticides (which kill insects), fungicides (which kill fungi) and other pesticides.

SCOPE OF THE REPORT:

This report focuses on the Garden Pesticides in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Pesticides constitute the largest category within the market for crop protection chemicals, with biopesticides accounting for a comparatively minute share. However, growing environmental concerns regarding the use of synthetic pesticides that are primarily produced using petrochemical or inorganic raw materials have resulted in increasing demand for eco-friendly biopesticides.

Biopesticides, on the other hand, are manufactured with renewable resources and are free of synthetic active ingredients. Being organic, free of chemical residues and eco-friendly products, biopesticides have been witnessing faster growth in demand compared to their synthetic counterparts.

The technology here is much more mature than in the emerging market. The main drivers of the market are: the development of the economy, policy support, consumer products development, and environment friendly and recycling awareness.

The US Garden Pesticides market has been growing slower in recent years; the manufacturers are facing the fierce competition in the market. So, they are concerning more on their innovation R&D of new materials and technology.

Factors driving the markets for Garden pesticides include decreasing arable land, increasing population, the requirement of improving crop yields and adoption of GM technology, specifically herbicide-resistant crops. On the other hand, regulatory authorities such as the EPA (Environment Protection Agency) frequently come up with stringent laws related to curbing pesticide use for alleviating environmental damage and increasing consumer awareness about pesticide consumption, which is expected to be instrumental in slowing down growth in demand for synthetic pesticides.

The worldwide market for Garden Pesticides is expected to grow at a CAGR of roughly 2.0% over the next five years, will reach 840 million US\$ in 2023, from 750 million US\$ in 2017, according to a new GIR (Global Info Research) study.
