Abstracts

Garden tractors, also known as compact utility tractors, are heavy-duty build tractors that are utilized for cutting grass. They are versatile garden maintenance machines that have more horsepower than the conventional lawn tractors.

SCOPE OF THE REPORT:

This report focuses on the Garden Tractors in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The garden tractor market can be segmented based on engine type, application, and region. Based on engine type, the garden tractor market can be divided into gasoline or diesel garden tractor and electric garden tractor. The global approach toward green vehicles is expected to boost the electric garden tractor segment during the forecast period.

Based on application, the garden tractor market can be segregated into mowing, mowing & hauling, and others. The grass cutting only segment accounts for a prominent share of the market owing to its major purpose of grass cutting. The grass cutting only segment is expected to expand at a sluggish pace owing to its higher cost, which in turn is boosting the demand for lawn tractors, which are economical, easy to operate, and are ideal for small gardens.

In terms of geography, the garden tractor market can be segmented into Asia Pacific, Europe, North America, Latin America, Middle East & Africa, and Rest of the World (ROW). Asia Pacific accounts for a major share of the global garden tractor market due to the high rate of adoption and rise in the number of golf courses in the region, especially in China, Japan, ASEAN, and South Korea. North America holds a major

share of the market due to the increasing trend of homegrown organic fruits and vegetable in the region. The garden tractor market in North America is expected to expand at a significant growth rate owing to the preference for gardening in the region.

The worldwide market for Garden Tractors is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
