## Abstracts

Gasoline direct injection (GDI), also known as petrol direct injection, direct petrol injection, spark-ignited direct injection (SIDI) and fuel-stratified injection (FSI), is a variant of fuel injection employed in modern two-stroke and four-stroke gasoline engines. The gasoline is highly pressurized, and injected via a common rail fuel line directly into the combustion chamber of each cylinder, as opposed to conventional multipoint fuel injection that injects fuel into the intake tract or cylinder port. Directly injecting fuel into the combustion chamber requires high-pressure injection, whereas low pressure is used injecting into the intake tract or cylinder port.

### SCOPE OF THE REPORT:

This report focuses on the Gasoline Direct Injection Systems in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The development of gasoline direct Injection (GDI) system is largely related to the automotive industry and other industries. The industry is expected to be quickly growing in the next several years.

Europe is the largest supplier and consumption market as the diesel vehicles are very popular in Europe. In 2016, Europe occupied production market share of 31.8%, and consumption market share of 27.89%. While China is the fast growing production market with average growth rate of 40.9% in the last several years.

Due to the stricter emission policies, High Press Common Rail Injection System is the more and more popular due to the sufficient burning. The consumption market share of Passenger Vehicle is about 64.78% in 2016 and the figure is expected to be higher in

the next several years.

The worldwide market for Gasoline Direct Injection Systems is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
