SCOPE OF THE REPORT:

This report focuses on the Gear Couplings in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. During 2017, the oil and gas industry segment accounted for the major shares of the gear couplings market. The increasing use of gear couplings is mainly due to absorption of shock loads during the process of power transmission and due to harsh environmental conditions will contribute to the growth of this industry segment in the coming years.

In terms of geographic regions, EMEA will be the major revenue contributor to the gear couplings market throughout the forecast period. The increase in power generation in countries, such as Germany, the UK, Italy, and France and rising investments in renewable power generation plants will increase the adoption of gear couplings during the forecast period in the region.

The worldwide market for Gear Couplings is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
