Abstracts

Glass-ceramics are polycrystalline materials of fine microstructure that are produced by the controlled crystallisation (devitrification) of a glass.

Glass-ceramics (also known as vitrocerams, pyrocerams, vitrocerâmicos, vitroceramiques and sittals) are produced by controlled crystallization of certain glasses— generally induced by nucleating additives. Controlled ceramization yields an array of materials with various combinations of properties.

SCOPE OF THE REPORT:

This report focuses on the Glass Ceramics in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Although in recent years glass ceramics industry kept developing, future is predicted to face uncertainties caused by uncertainty of global and regional economic status. A major slowdown in global economic growth and a slump in Asian demand for resources would lead to lower demand growth rate for glass ceramics.

Geographically, China is the largest producer and consumer, followed by EU and USA, Japan also plays an important role, with a long history. In the future, the developed countries will keep a steady demand for glass ceramics. The driving force for glass ceramics will come from the emerging market, like India, China and the Southeast Asia countries.

The worldwide market for Glass Ceramics is expected to grow at a CAGR of roughly 4.0% over the next five years, will reach 1870 million US\$ in 2023, from 1480 million US\$ in 2017, according to a new GIR (Global Info Research) study.
