Abstracts

Glucoamylase is a glycoprotein with the molecular weight 60000-100000 containing mannose, glucose, galactose and alduronic acid. It can be used to the non-reduced end of amyllum and dextrin molecule to produce glucose. Glucoamylase is widely used biocatalysts in food industry. The major application of glucoamylase is the catalysis of alcohol, starch sugar, beer, white spirit and other fermentation industries.

SCOPE OF THE REPORT:

This report focuses on the Glucoamylase in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

First, the glucoamylase industry concentration is not high. In the world wide, giant manufactures mainly distribute in China. China has a long history and unshakable status in this industry. With the future capacity growth, China glucoamylase production is in the rising trend.

Second, all manufactures in the world are committed to the improvement of product. These two years, with the development the glucoamylase industry, some companies mainly pay attention to rising technology process, in order to form circular production and reduce costs.

Third, we tend to believe this industry now is close to mature, and the consumption increasing degree will show a smooth curve. On product prices, the slow downward trend in recent years will maintain in the future, as competition intensifies.

Fourth, although sales of glucoamylase brought opportunity, the study group recommends the new entrants just having money but without technical advantage and downstream support do not to enter into the metronidazole field.

The worldwide market for Glucoamylase is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
