Abstracts

The biosensor is a sensing device, which consists of a combination of a specific biological element and a transducer. Biosensors are defined as analytical devices that convert a biological response into electrical signal and assist in measuring a wide spectrum of analytes including organic compounds, gases, bacteria and others.

SCOPE OF THE REPORT:

This report focuses on the Glucose Biosensors in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

At present, in developed countries, the glucose biosensors industry is generally at a more advanced level. The world's large enterprises are mainly concentrated in USA and Europe. Meanwhile, foreign companies have more advanced equipment, strong R & D capability, and leading technical level. However, foreign companies' manufacturing cost is relatively higher, compared with Chinese companies. With the development of Chinese glucose biosensors production technology, their share in the international market is increasing, and competitiveness in the international market gradually increases.

Although glucose biosensors brings a lot of opportunities, the study group recommends the new entrants just having money but without technical advantage and upstream and downstream support do not to enter into this field.

The worldwide market for Glucose Biosensors is expected to grow at a CAGR of roughly 1.6% over the next five years, will reach 3440 million US\$ in 2023, from 3120

million US\$ in 2017, according to a new GIR (Global Info Research) study.
