Abstracts

Graphitic carbon foam has a highly-oriented, low density graphite foam structure. This aligned graphite structure has extremely high thermal conductivity with the highest conductivity in the direction of the foam height or thickness. In addition, graphitic carbon foam has demonstrated high strength, high electrical conductivity, and low coefficient of thermal expansion.

SCOPE OF THE REPORT:

This report focuses on the Graphitic Carbon Foam in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. In consumption market, the global sales value increases with the 8.99% average growth rate. USA is the mainly consumption regions due to the bigger demand of downstream applications. In 2015, USA occupied 92.66% of the global consumption value. With low density and well thermal conductivity of graphitic carbon foam, the downstream application industries will need more graphitic carbon foam products. So, graphitic carbon foam has a huge market potential in the future. Manufacturers engaged in the industry are trying to produce high purity and good performance graphitic carbon foam through improving technology. The major raw materials for graphitic carbon foam are coal and asphalt, etc. Fluctuations in the price of the upstream product will impact on the production cost of graphitic carbon foam, and then impact the price of graphitic carbon foam. The technology cost of graphitic carbon foam is also an important factor which could impact the price of graphitic carbon foam. The graphitic carbon foam manufacturers are trying to reduce production cost by developing production method.

We tend to believe this industry is a rising industry, and the consumption increasing degree will show a smooth growth curve. And the price presents decreasing trend according to the economy development status and international competition. Also, there will be decreasing trend in gross margin.

The worldwide market for Graphitic Carbon Foam is expected to grow at a CAGR of roughly 5.9% over the next five years, will reach 33 million US\$ in 2023, from 23 million US\$ in 2017, according to a new GIR (Global Info Research) study.
