Abstracts

Halogenated butyl rubber is white to light amber bales. It is got from butyl rubber halogenated with chlorine and bromine.

Both chlorinated (chlorobutyl) and brominated (bromobutyl) versions of halobutyl are commercially available. They are mainly used in the tire industry. In addition to tire applications, halogenated butyl rubber's good impermeability, weathering resistance, ozone resistance, vibration dampening, and stability make them good materials for pharmaceutical stoppers, construction sealants, hoses, and mechanical goods. In this report, the volume of halogenated butyl rubber is calculated by chlorinated (chlorobutyl) and brominated (bromobutyl) rubber.

SCOPE OF THE REPORT:

This report focuses on the Halogenated Butyl Rubber in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Asian region is one of the major consuming regions of halogenated butyl rubber. And insiders predict that the region will become the key stimulator to the development of halogenated butyl rubber industry in the coming years. Asian consumption is about 323.4 K MT in 2015, accounting for about 39.71% consumption share. In the next few years, more and more capacity will release in Asian region. With the increase output of halogenated butyl rubber, price and gross margin are estimated to decline further.

The worldwide market for Halogenated Butyl Rubber is expected to grow at a CAGR of roughly 6.3% over the next five years, will reach 5320 million US\$ in 2023, from 3690 million US\$ in 2017, according to a new GIR (Global Info Research) study.
