KVM switches are hardware devices that allow IT personnel to use a single keyboard, video monitor, and mouse (KVM) to control more than one computer at a time. High class KVM switches with multiple ports can be installed in a server rack using only 1U or 2U in space, and help organization improve efficiency and reduce cost by centralizing computing resources in server rooms, enabling users to share expensive resources and providing users with a more effective work environment. High class KVM switches possess high density, high resolutions, high ports numbers and multi users on operation at the same time, and widely applied in large networks.
