Abstracts

High-frequency inductors consist of ceramic materials made of glass and internal/external electrodes made of silver. These inductors can be applied usefully for high frequency of 100 MHz or higher because they have high Q characteristics in high frequency, the SRF characteristics in a high-frequency band, and low resistivity. They are mainly used for impedance matching circuits in RF systems.

SCOPE OF THE REPORT:

This report focuses on the High Frequency Inductors in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. At present, in the foreign industrial developed countries the High Frequency Inductors industry is generally at a more advanced level, the world's large enterprises are mainly concentrated in Japan. Meanwhile, foreign companies have more advanced equipment, strong R & D capability, the technical level is in a leading position. But foreign companies' manufacturing cost is relatively high, compared with Chinese companies, the manufacturing cost has competitive disadvantage, as the Chinese High Frequency Inductors production technology continues to improve, their share in the international market is increasing, competitiveness in the international market gradually increase. China's High Frequency Inductors industry has developed into a national industry with certain research and production capacity, industry product mix has gradually improved, currently China has become international High Frequency Inductors large consumption country, but the production technology is relatively laggard. China dominates the global demand market for High Frequency Inductors and APAC is anticipated to continue increase for a foreseeable future.
