SCOPE OF THE REPORT:

This report focuses on the Human Centric Lighting and Environmental Lighting in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Human-centric lighting system comes with a control that can adjust the color temperature of the LED to simulate morning to evening light and create a natural light environment in line with people's physiological rhythm, suitable for use in an indoor environment that lacks natural lighting. In addition, human-centric lighting can also be used to influence people's mood and spirit, with warm colors promoting relaxation while cool colors help with contraction and enhance productivity.

Lighting quality is advanced in Europe. The human centric lighting and environmental lighting will be an illumination trend that is currently popular in European market. In 2015, there is already some considerable acceptance for human centric lighting solutions in the health sector, however, with little reflection in absolute figures due to the small relevant floor space. Over the next years, the office sector will gain further relevance, whereas today human centric lighting solutions are partially in use in state-of-the-art commercial centers.

The worldwide market for Human Centric Lighting and Environmental Lighting is expected to grow at a CAGR of roughly 67.3% over the next five years, will reach 2150 million US\$ in 2023, from 160 million US\$ in 2017, according to a new GIR (Global Info Research) study.
