Hyperspectral remote sensing, also known as imaging spectroscopy, is a relatively new technology that is currently being investigated by researchers and scientists with regard to the detection and identification of minerals, terrestrial vegetation, and man-made materials and backgrounds.

SCOPE OF THE REPORT:

This report focuses on the Hyperspectral Remote Sensing in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. This report covers hyperspectral imaging cameras (Hyperspectral Cameras, Accessories). The hyperspectral cameras can be operated using software, which controls the cameras and scanning stage and has many tools to analyze hyperspectral data.

With the increasing in production capacity, expected that the hyperspectral remote sensing raw material price will be stable in the short term. However, the improvement of energy, transportation costs, and labor costs, will play a significant role in promoting the cost of hyperspectral remote sensing.

There are companies adding new capacities and aims at the cost and quality leadership which shall improve profitability. As the same time, companies are focusing on technological innovation, equipment upgrades, and process improvements, to reduce costs and improve quality.

The worldwide market for Hyperspectral Remote Sensing is expected to grow at a CAGR of roughly 3.8% over the next five years, will reach 190 million US\$ in 2023, from

160 million US\$ in 2017, according to a new GIR (Global Info Research) study.
