Abstracts

Inductive Position Sensors are devices which generates output signal or electrical signal when metal objects are either inside or entering into its sensing area from any direction. The metal objects above includes iron, aluminum, brass, copper, etc with varied sensing distances. First inductive position sensor was introduced in the mid 60's.

SCOPE OF THE REPORT:

This report focuses on the Inductive Position Sensors in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. In the next five years, the global consumption of Inductive Position Sensors will maintain a 6%-8% annual growth rate, consumption is expected to beyond 21000 K units in 2020, the average operating rate will remain at 80% to 90%.

Demand is driven by demographics and the health of the economy. The profitability of individual companies depends on their ability to bid accurately, secure contracts, and control costs. Large companies enjoy economies of scale in financing and the ability to offer a broad range of services in many locations. Smaller companies can compete effectively by specializing in particular services or focusing on certain geography.

The worldwide market for Inductive Position Sensors is expected to grow at a CAGR of roughly 2.5% over the next five years, will reach 940 million US\$ in 2023, from 820 million US\$ in 2017, according to a new GIR (Global Info Research) study.
