Abstracts

Industrial gas is a generic term for gases (liquefied gases) used widely in all industries for raw materials and intermediate materials in the manufacturing industry, or for quality improvement, energy saving and the safety in manufacturing processes. This does not include city gas (coal gas for domestic use) and LP gas that are mainly used for household energy. Medical gases used in hospitals are included among industrial gases.

SCOPE OF THE REPORT:

This report focuses on the Industrial Gases in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Industrial gases are used in a variety of purity grades and for a wide range of purposes, including food gases and medical gases. Industrial gases can make production processes safer and more cost-effective and improve product quality. They often contribute to environmental protection. Some processes and applications would even be inconceivable without the chemical properties of gases.

Typical user sectors include the automotive industry, the steel industry, environmental engineering, food and beverages, construction, metallurgy, glass and ceramics, medicine and pharmaceuticals, the chemical industry, and research and development. The global industrial gases market is highly concentrated as it is mainly dominated by four giants, Linde Group, Air Liquide, Praxair, Air Products and Chemicals. However, there is news revealing that Praxair is negotiating with Linde about the merger. Once the merger is implemented, the market will become more and more concentrated.

The worldwide market for Industrial Gases is expected to grow at a CAGR of roughly 1.7% over the next five years, will reach 66600 million US\$ in 2023, from 60200 million US\$ in 2017, according to a new GIR (Global Info Research) study.
