Abstracts

Refractories are heat-resistant materials that constitute the linings for high-temperature furnaces and reactors and other processing units. In addition to being resistant to thermal stress and other physical phenomena induced by heat, refractories must also withstand physical wear and corrosion by chemical agents. ASTM C71 defines refractories as 'non-metallic materials having those chemical and physical properties that make them applicable for structures, or as components of systems, that are exposed to environments above 1,000 °F (811 K; 538 °C)'.

SCOPE OF THE REPORT:

This report focuses on the Industrial Refractory Materials in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Steel and non-ferrous metals, glass, cement and energy such as electricity and gases are important factors necessary to support economic activities and social life. Manufacturer plays a key role as these cannot be produced without advanced refractories and related facilities.

In the future, global market is expected to witness significant growth on account of rising applications, so in the next few years, Industrial Refractory Materials production will show a trend of steady growth. In 2023 the production of Industrial Refractory Materials is estimated to be 50503.4 K MT. On product prices, the slow downward trend in recent years will maintain in the future.

The worldwide market for Industrial Refractory Materials is expected to grow at a CAGR of roughly 1.3% over the next five years, will reach 42500 million US\$ in 2023, from
