Abstracts

Industrial salt is one of basic raw materials in chemical industry. It is also called “Mother of Chemical Industry”. It can be used in many industries such as chemicals manufacturing, road de-icing, edible salt, food processing and etc.

SCOPE OF THE REPORT:

This report focuses on the Industrial Salt in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

One of the key trends will be the increased production using solar evaporation process.

The significant growth of the industrial salts industry in APAC has resulted in the rise in production of industrial salts by the solar evaporation process. Salt is produced by the following three primary production methods: seawater solar evaporation or inland brines, brine extracted through solution mining, and mined rock salt. Owing to the availability of salty lakes and longer coastlines in the developing countries in India and China in APAC, the salt manufacturers in these countries are producing the majority of their products by the solar evaporation process. Also, the simplicity and low cost of this process than its counterparts, is further driving the adoption of this process by the vendors in the global industrial salts market.
