Abstracts

An inflator or compressor is a high pressure unit that pushes air out of its hose. Its power typically comes from connecting the compressor to the vehicle's cigarette lighter or battery and its hose is connected to the tyre valve in order for air to enter into the tyre.

SCOPE OF THE REPORT:

This report focuses on the Inflators in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Technology, product design, and pricing patterns influence purchases of Inflator. The situation is rather complex, as the companies attempt to cater to diverse segments. The market is currently dominated by a handful of local companies that own the core technologies, including Slime, Campbell Hausfeld and so on.

Lacking features of a monopoly so far and having a relatively basic technology, the Inflator industry still poses some formidable barriers to entry. Thus, capital requirements are quite high due to production features and the diverse nature of the product families. Seasonality of business, price rivalry, government rules and regulations, and limited distribution channels also pose some entry barriers. Yet another deterrent to market entry is the complexity of logistics. Distribution costs may rise further as some mass merchandisers openly require payment by the manufacturers for shelf space, especially for new products. Name identity and brand image require extensive advertising.

The worldwide market for Inflators is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017,

according to a new GIR (Global Info Research) study.
