### SCOPE OF THE REPORT:

This report focuses on the Irrigation Valves in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Water is the basic agricultural input required in any type of geographical segments. Before the advent of mechanization, farmers depended on natural sources for irrigation. However, mechanization in agriculture has moved well past tractors, to encompass every aspect in the crop production cycle. Irrigation mechanization is one of the newest advances made in agriculture. The latest segment in irrigation mechanization include sprinkler and drip irrigation that are further explained on component basis. Such mechanization not only increases productivity and yield per hectare, it reduces the water consumption per farm. Located in Crawfordsville, Indiana, Banjo Corporation is a leader in special purpose, severe duty pumps, valves, fittings and systems which serve both OEM and after-market applications in agricultural and industrial liquid handling. In 2006, IDEX agreed to acquire Banjo Corporation for approximately \$44 million. The cash purchase price is approximately \$183 million. The acquisition is used to provide continued organic growth opportunities chemical, alternative fuels and other emerging agricultural and industrial

applications for IDEX.

The worldwide market for Irrigation Valves is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
