Isobutylene (or 2-methylpropene) is a hydrocarbon of industrial significance. It is a four-carbon branched alkene (olefin), one of the four isomers of butylene. At standard temperature and pressure it is a colorless flammable gas.

SCOPE OF THE REPORT:

This report focuses on the Isobutene in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The classification of Isobutene includes MTBE Cracking, Tert-butanol (TBA), and the proportion of MTBE Cracking in 2017 is about 73.9%, However, growing concerns regarding groundwater contamination caused due to leakage of MTBE coupled with increasing popularity of ethanol as a gasoline blending agent is expected to segment impact growth negatively.

Isobutene is widely used in Butyl Rubber, MMA, PIB and other. The most proportion of Isobutene is used in Butyl Rubber, and the consumption proportion is about 54.2% in 2017.

North America is the largest supplier of Isobutene, with a production market share 42%. The second place is Europe, following North America with the production market share of 31%.

The worldwide market for Isobutene is expected to grow at a CAGR of roughly 5.5% over the next five years, will reach 6260 million US\$ in 2023, from 4540 million US\$ in 2017, according to a new GIR (Global Info Research) study.
