Isoprene Monomer or 2-methyl-1, 3-butadiene, is a common organic compound with the formula $\text{CH}_2=\text{C}(\text{CH}_3)\text{CH}=\text{CH}_2$. In its pure form, it is a colorless volatile liquid.

SCOPE OF THE REPORT:

This report focuses on the Isoprene Monomer in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The Isoprene Monomer industry concentration is high; there are no more than 20 manufacturers that take the majority share in the whole industry, and mainly distributed in Europe, US and Japan. In the world wide, giant manufactures mainly distribute in Russia and United States such as Nizhnekamskneftekhim, Sibur, Synthesz-Kauchuk and Goodyear Chemical.

Most company have one or two plants, usually in domestic area. Also, there are international companies set up factories in other countries too, such as Shell has a plant in United States. Many companies developed their own production line to produce market products such as synthetic rubber, rather than sale Isoprene Monomer to other companies.

All manufacturers in the world are committed to the improvement of product. Many companies developed their own technology to produce Isoprene Monomer. Russia companies like Togliattikauchuk applies Dehydrogenation method, due to the low production of natural rubber. C5 fraction extraction method is usually applied by American and Chinese companies, which is also related to the petroleum refinery situation in these areas. For the past 5 years, some Chinese manufacturers have deeply researched about the technology of producing Isoprene Monomer, to meet the

increasing demand in rubber industry in domestic area since 2010. The production of Isoprene Monomer is increasing in the past years, while the price of Isoprene Monomer is in fluctuation. The price of Isoprene monomer is forecasted to increase at rate of 1%~3%, due to the increasing of crude oil price and tightening of natural rubber supply in the coming years. As the application of Isoprene Monomer is increasing in both synthetic rubber industry and fine chemical industry, the demand of Isoprene Monomer would increase continuously in the future, and the increase would be more modest.

The worldwide market for Isoprene Monomer is expected to grow at a CAGR of roughly 6.0% over the next five years, will reach 3120 million US\$ in 2023, from 2330 million US\$ in 2017, according to a new GIR (Global Info Research) study.
