Abstracts

Isoprene rubber (IR) is a polymer of synthetic isoprene. It combines the key qualities of natural rubber such as good mechanical properties and hysteresis with superior features such as high purity, excellent clarity, good flow, low gel content, no nitrosamines, and no natural rubber proteins. The IR products are widely used in tire, medical products, conveyor belts and others.

In addition, polyisoprene elastomer is equivalent to isoprene rubber (IR).

SCOPE OF THE REPORT:

This report focuses on the Isoprene Rubber (IR) in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The isoprene rubber industry is easily affected by the price of the natural rubber crude oil and natural gas. The natural rubber is an alternative of IR products, with the same price trends in the past few years. The price of natural rubber changed intensely since 2011, which lead to the fluctuation of IR price.

The major raw material for isoprene rubber is isoprene. On the global market, supply of raw materials is full. Fluctuations in the price of the upstream product will impact on the production cost of isoprene rubber industry.

For product prices, the slow downward trend in recent years will maintain in the future as competition intensifies. Besides, prices gap between different brands will go narrowing gradually. Also, there will be fluctuation in gross margin.

The worldwide market for Isoprene Rubber (IR) is expected to grow at a CAGR of

roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
