Abstracts

L-serine, a white crystalline solid or powder without odour, is an amino acid with the formula $\text{HO}_2\text{CCH}(\text{NH}_2)\text{CH}_2\text{OH}$. It is one of the proteinogenic amino acids.

SCOPE OF THE REPORT:

This report focuses on the L-serine in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. L-Serine, a white crystalline solid or powder, is usually used as APIs during the medicine synthesis. Also, it can be used in other industries, such as food industry, cosmetics industry and so on.

Among those applications, demand from pharm industry accounted for the largest consumption proportion, which was 44.80% in 2015, followed by food industry with the share of 43.64%.

In the past few years, limited by technology issues, the production of L-serine was mainly dominated by the companies from Europe, USA and Japan. Actually, although some new companies from developing countries, such as China, have entered into the industry, they have to face the technology obstacles, such as the yield rate as well as product performance issues. Leading companies, such as Ajinomoto and Evonik, have large market share of L-serine and highest reputation on their L-serine.

Japan, USA and Europe are the major production bases of L-serine in the world. The three regions held about 77% production share in 2015. As for China, since Ajinomoto, Evonik as well as other companies built plants in the region in the past few years, the country's L-serine business also develops fast.

Refers to consumption, Europe is the largest consumer. The region consumed about

1870 MT L-serine in 2015. The follower is USA, which consumed about 1450 MT.

Considering the current status, information revealed that the L-serine market will keep increasing in the coming years. It is believed that more and more companies will enter in the field once the technology barrier is broken. Also, the industry will witness fierce competition and price decline further in the next few years.

The worldwide market for L-serine is expected to grow at a CAGR of roughly 2.2% over the next five years, will reach 330 million US\$ in 2023, from 290 million US\$ in 2017, according to a new GIR (Global Info Research) study.
