Abstracts

Linear Alkyl Benzene Sulphonic Acid (LABSA) is an anionic surfactants with molecules characterized by a hydrophobic and a hydrophilic group. They are nonvolatile compounds produced by sulfonation. Linear alkyl benzene sulfonic acid are complex mixtures of homologues of different alkyl chain lengths (C10 to C13 or C14) and phenyl positional isomers of 2 to 5-phenyl in proportions dictated by the starting materials and reaction conditions, each containing an aromatic ring sulfonated at the para position and attached to a linear alkyl chain at any position with the exception of terminal one (1-phenyl).

SCOPE OF THE REPORT:

This report focuses on the LABSA in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The properties of linear alkyl benzene sulfonic differ in physical and chemical properties according to the alkyl chain length, resulting in formulations for various applications. LABSA has mainly two types, which include LABSA 96% and LABSA 90%. With washing function of LABSA, the downstream application industries will need more LABSA products. So, LABSA has a huge market potential in the future. Manufacturers engaged in the industry are trying to produce high purity and good performance LABSA through improving technology.

The worldwide market for LABSA is expected to grow at a CAGR of roughly 2.3% over the next five years, will reach 4040 million US\$ in 2023, from 3600 million US\$ in 2017, according to a new GIR (Global Info Research) study.
