Abstracts

Lactulose a 'bifidus factor' is composed of galactose and fructose, which can be produced by the isomerization of lactose. It is a prebiotic carbohydrate which stimulates the growth of health-promoting bacteria in the gastrointestinal tract, it can also be used for the treatment of constipation, hepatic encephalopathy, tumour prevention, and to maintain blood glucose and insulin level.

SCOPE OF THE REPORT:

This report focuses on the Lactulose in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Lactulose has two types, which include crystalline lactulose and liquid lactulose. And each type has application industries relatively. With pharmaceuticals effect of lactulose, the downstream application industries will need more lactulose products. So, lactulose has a huge market potential in the future. Manufacturers engaged in the industry are trying to produce high purity and good performance lactulose through improving technology.

The major raw materials for lactulose are lactose, sodium hydroxide, and other auxiliary chemicals. Fluctuations in the price of the upstream product will impact on the production cost of lactulose. The production cost of lactulose is also an important factor which could impact the price of lactulose. The lactulose manufacturers are trying to reduce production cost by developing production method.

The worldwide market for Lactulose is expected to grow at a CAGR of roughly 1.4% over the next five years, will reach 160 million US\$ in 2023, from 150 million US\$ in
