Abstracts

Large Bore Vascular Closure Devices, vascular closure devices are medical devices used to achieve hemostasis of the small hole in the artery after a cardiovascular procedure of endovascular surgery requiring a catheterization.

The main goal of a Vascular Closure Device is to provide rapid hemostasis of the artery as well as reduce access site complications. VCD's also help reduce time to ambulation and time to hospital discharge. In addition, VCD's are more comfortable for the patient compared to manual compression.
