Abstracts

Friction welding (FRW) is a solid-state welding process that generates heat through mechanical friction between work pieces in relative motion to one another, with the addition of a lateral force called 'upset' to plastically displace and fuse the materials. Linear Friction Welding: a solid-state process in which one part is chuck oscillates at a high speed, and then pressed against another part that is held stationary. The resulting friction heats the parts, causing them to forge together.

SCOPE OF THE REPORT:

This report focuses on the Linear Friction Welding Machines in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. There are many linear friction welding machines manufacturers in the world and most of them produce all kinds of friction welding machine, such as Branson, Thompson, MTI, Bielomatik and Forward Technology. All the manufactures are mainly concentrated in USA, Europe, etc. Although there are also some Friction Welding Machine manufacturers in developing countries, but the scales of their Linear friction welding machines companies is relative small, and the products quality is inferior to foreign Friction Welding Machine products, so the price is lower than some foreign Friction Welding Machine products.
As the technology of linear friction welding machines is relatively mature and the downstream market, especially for automobile is growing fast, so there are lots of enterprises in the linear friction welding machines market. The high-end linear friction welding machines was mainly produced in Europe and United States because their advanced R&D lever, but most of the products were consumed in developing countries
