Abstracts

A magnetic bearing is a bearing that supports a load using magnetic levitation. Magnetic bearings support moving parts without physical contact. For instance, they are able to levitate a rotating shaft and permit relative motion with very low friction and no mechanical wear. Magnetic bearings support the highest speeds of all kinds of bearing and have no maximum relative speed.

Magnetic bearing technology is becoming more and more important as an alternative to conventional bearing supports, and is used when the technical requirements can no longer be fulfilled by other bearing types. This especially applies to industrial machinery with very high rotational speeds and shaft weights of up to several tons.

SCOPE OF THE REPORT:

This report focuses on the Magnetic Bearings in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

As Chinese overall economic downward trend in the past few years, and international economic situation is complicated, in the next few years there will be many uncertainties coupled with the Magnetic Bearings industry. In short supply to the market in the past few years, more and more companies enter into Magnetic Bearings industry.

In Magnetic Bearings product demand market is a fast-growing market, but at present consumption areas are mainly concentrated in Europe and other developed countries.
