SCOPE OF THE REPORT:

This report focuses on the Malonic Acid in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Malonic acid, also called propanedioic acid, is a precursor to specialty polyesters. It is a dibasic organic acid whose diethyl ester is used in syntheses of vitamins B1 and B6, barbiturates, and numerous other valuable compounds.

In consumption market, the global consumption value of malonic acid increases with the 2.85% average growth rate. Europe and China are the mainly consumption regions due to the bigger demand of downstream applications. In 2016, these two regions occupied 71.15% of the global consumption volume in total.

The major raw materials for malonic acid are cyanoacetic acid or diethyl malonate, and other auxiliary chemicals. Fluctuations in the price of the upstream product will impact on the production cost of malonic acid. The production cost of malonic acid is also an important factor which could impact the price of malonic acid. The malonic acid manufacturers are trying to reduce production cost by developing production method.

We tend to believe this industry is a rising industry, and the consumption increasing degree will show a smooth growth curve. And the price presents decreasing trend according to the economy development status and international competition. Also, it will be decreasing trend in gross margin.

The worldwide market for Malonic Acid is expected to grow at a CAGR of roughly 3.0% over the next five years, will reach 50 million US\$ in 2023, from 42 million US\$ in 2017, according to a new GIR (Global Info Research) study.
