Abstracts

Marble is a metamorphic rock that forms when limestone is subjected to the heat and pressure of metamorphism. It is composed primarily of the mineral calcite (CaCO₃) and usually contains other minerals such as: clay minerals, micas, quartz, pyrite, iron oxides and graphite. Under the conditions of metamorphism the calcite in the limestone recrystallizes to form a rock that is a mass of interlocking calcite crystals.

SCOPE OF THE REPORT:

This report focuses on the Marble in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Marble is a metamorphic rock that forms when limestone is subjected to the heat and pressure of metamorphism. It is composed primarily of the mineral calcite (CaCO₃) and usually contains other minerals such as: clay minerals, micas, quartz, pyrite, iron oxides and graphite.

The global marble market is worth over \$50 Billion, according to our survey. The industry is highly fragmented in terms of products, end uses and suppliers, but its markets can broadly be categorized as construction and decoration, statuary and monuments, furniture and others. Until 2016, EU overall was the dominant producer and exporter of marble, but strong growth in emerging markets, especially in China, Pakistan and India, means that Asia is assuming dominance as a producing and exporting region. In 2016, the world production of marble reached 816 Million Sq.m. The world's top ten natural marble producers include China, India, Iran, Turkey, Italy, Spain, Brazil, Egypt, Portugal and Greece. Leading players in marble industry are Levantina, Polycor inc, Indiana Limestone Company, Vetter Stone, Topalidis S.A., Antolini, etc.

Marble is a highly-fragmented industry with a variety of manufacturers ranging from large multinational corporations to small privately owned companies. The top ten producers account for just c 3.76% of the market. Marble can be classified based on the color. Yellow marble is assumed to be the most prevalent kind of marble, considering the large stock of beige marble in Europe. The production of black marble, white marble and green marble are also considerable.

A key variable in the performance of marble producers is raw material costs, specifically the speed at which any increase can be passed through to customers. According to U.S. Geological Survey (USGS), stone resources of the world are sufficient to cater to foreseeable needs. Nevertheless, resources can be limited on a local level or occasionally on a regional level due to the lack of a particular type of stone. Marble resources are mainly located in Italy, China, Turkey, Philippines, France, Brazil, USA, India, Morocco, Austria, Russia, Japan, Portugal and Greece. Italy has abundant resources of high quality marble, positioning the nation as a key marble producer and exporter in the world. Turkey is located at the world's richest natural stone Alps area. There are a mass of marble resources from Anatolia to the Thrace region. The materials of marble include marble blocks, to some companies, marble block can be satisfied with own production, while to others, marble blocks have to be purchased from other suppliers. The price of marble tile follow the marble block price, with a lag, and movements can inject volatility into producer margins. In general, most producers structure the majority of their contracts to include a 'pass through' clause that smooth the impact.

The largest consumption area of marble is Europe, which accounted for 29.05% of world marble consumption in 2016. The consumption of marble in USA, India and China are also considerable. The global marble production value will increase to 64 Billion USD in 2023, from 52 Billion USD in 2016. It is estimated that the global marble demand will develop with an average growth rate of around 3.01% in terms of revenue from 2106 to 2023.

The worldwide market for Marble is expected to grow at a CAGR of roughly 3.0% over the next five years, will reach 62100 million US\$ in 2023, from 52000 million US\$ in 2017, according to a new GIR (Global Info Research) study.
