Abstracts

Mechanical testing reveals the elastic and inelastic behavior of a material when force is applied. A mechanical test shows whether a material or part is suitable for its intended mechanical applications by measuring elasticity, tensile strength, elongation, hardness, fracture toughness, impact resistance, stress rupture, and fatigue limit.

SCOPE OF THE REPORT:

This report focuses on the Mechanical Test Equipment in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. North America was the largest consumption market with a market share of 25.13% in 2012 and 21.53% in 2017 with an increase of 3.60 %. China and Europe ranked the second and third markets with the market share of 21.13% and 20.14% in 2016.

This market is increasingly witnessing a trend towards upgrading equipment, replacing relevant modules of existing systems and retrofitting. This is mainly due to advancements made in computer control technology, which has led to a growing focus on data collection and real time analysis. Retrofitting is attractive to end users who are always limited by low capital budgets. Yet, it challenges the sale of new equipment. To successfully deal with this challenge, companies should maintain a balance between retrofitting and selling new equipment. From another point of view, it could also be considered as an opportunity companies could take advantage of to improve their sales and market position.

The worldwide market for Mechanical Test Equipment is expected to grow at a CAGR of roughly 3.3% over the next five years, will reach 1290 million US\$ in 2023, from 1070

million US\$ in 2017, according to a new GIR (Global Info Research) study.
