SCOPE OF THE REPORT:

This report focuses on the Medical Computer Cart in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Medical computer carts can be defined as medical carts used by medical staff for several day to day activities such as checking electronic medical records, distributing drugs, charting and EMR, medication dispensing, and nursing education. These are suitable for large hospitals, health clinics, pharmacies, and psychiatric hospitals. The prevalence rate of Medical Computer Carts is small. Production and consumption areas are both concentrated in North America and Europe. In 2016, the Sales market share rate of North America and Europe are 31% and 27%.

Integrated medical trolley is new product, and the prevalence rate is very small. And they would have fire potential due to their batteries. But we have reasons to believe that integrated medical trolley is the development trend of the future. More and more electronic companies enter into this market. Traditional trolley companies need to cooperate with electronic companies to occupy and expand market share.

The worldwide market for Medical Computer Cart is expected to grow at a CAGR of roughly 9.3% over the next five years, will reach 510 million US\$ in 2023, from 300 million US\$ in 2017, according to a new GIR (Global Info Research) study.
