Abstracts

Medical Device Connectivity is the establishment and maintenance of a connection through which data is transferred between a medical device, such as a patient monitor, and an information system.

SCOPE OF THE REPORT:

This report focuses on the Medical Device Connectivity in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Medical devices may be connected on wireless and wired networks. Wireless networks, including Wi-Fi, Wireless Medical Telemetry Service, and Bluetooth, provide more ubiquitous coverage of connectivity, allowing uninterrupted monitoring of patients in transit. Wired networks are fast, stable, and highly available. Wired networks are usually more costly to install at first and require ongoing costs for maintenance, but allow connectivity of the organization in a closed environment.

In this report we only include equipment for Medical Device Connectivity not include Software and services.

Market competition is not intense. Cisco Systems, Qualcomm, Philips Healthcare, Infosys, Cerner, TE, GE, Digi International etc. are the leaders of the industry, and they hold key technologies and patents, with high-end customers; have been formed in the monopoly position in the industry.

The worldwide market for Medical Device Connectivity is expected to grow at a CAGR of roughly 24.6% over the next five years, will reach 6040 million US\$ in 2023, from 2010 million US\$ in 2017, according to a new GIR (Global Info Research) study.
