## Abstracts

Medical tape, also known as surgical tape, is a type of adhesive tape used in medicine and first aid to secure bandages or transparent dressings onto a wound. Medical tape is designed to firmly fasten onto skin, wound dressings, and latent layers of tape, too, but without damaging skin during removal.

### SCOPE OF THE REPORT:

This report focuses on the Medical Tapes in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. For industry structure analysis, the medical tapes industry is fragmented. A variety of manufacturers ranging from large multinational corporations to small privately owned companies compete in this industry. The top six producers account for less than 40% of the market. Regionally, USA is the biggest production country of medical tapes, also the whole industry. Europe and China also produce large amount of medical tapes per year. For price trend analysis, a key variable in the performance of medical tapes producers is raw material costs, specifically the speed at which any increase can be passed through to customers. The price of the major raw material nonwoven and plastics varies according to the crude oil price. Also, competition landscape of product is relevant to the price trend. This year, as the downturn of global crude oil industry and increasing fierce competition, the medical tapes price would keep decreasing for at least the following 3 years.

The worldwide market for Medical Tapes is expected to grow at a CAGR of roughly 4.1% over the next five years, will reach 17900 million US\$ in 2023, from 14100 million

US\$ in 2017, according to a new GIR (Global Info Research) study.
