Abstracts

Medical (Diagnostic) X-ray generators are designed to provide electrical energy to be converted into X radiation. The quality and quantity of X radiation is pre-determined by the radiographer who sets the appropriate exposure factors at the control desk.

The principal function of an x-ray generator is to provide current at a high voltage to an x-ray tube. Electrical power available to a hospital or clinic provides up to about 480 V, much lower than the 20,000 to 150,000 V needed for x-ray production. Transformers are principal components of x-ray generators; they convert low voltage into high voltage through a process called electromagnetic induction.

X-ray Generator Modules

Modules of the x-ray generator include the high-voltage power circuit, the stator circuit, the filament circuit, the focal spot selector, and automatic exposure control (AEC) circuit. Generators typically have circuitry and microprocessors that monitor the selection of potentially damaging overload conditions in order to protect the x-ray tube. Combinations of kV, mA, and exposure time delivering excessive power to the anode are identified, and such exposures are prohibited. Heat load monitors calculate the thermal loading on the x-ray tube anode, based on kV, mA, and exposure time, and taking cooling into account. Some x-ray systems are equipped with sensors that measure the temperature of the anode. These systems protect the x-ray tube and housing from excessive heat buildup by prohibiting exposures that would damage them. This is particularly important for CT scanners and high-powered interventional fluoroscopy systems.

SCOPE OF THE REPORT:

This report focuses on the Medical X-Ray Generator in global market, especially in

Global (North America, Europe, Asia-Pacific, South America, Middle East and Africa) Medical X-Ray Generator Ma...

North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Medical X-Ray Generator is mainly produced in Europe and United States. CPI Medical, Spellman and Siemens are the major players in the industry. Their production accounts for more than 40% global Medical X-Ray Generator industry market share.

The competition of the industry is more furious in recent years. Sale prices are relatively stable and the changes of raw material prices are not obvious.

Due to the lack of medical facilities in developing countries, there is a strong demand for the product. It will be the major growth point in the future.

The worldwide market for Medical X-Ray Generator is expected to grow at a CAGR of roughly -0.1% over the next five years, will reach 300 million US\$ in 2023, from 300 million US\$ in 2017, according to a new GIR (Global Info Research) study.
