Abstracts

A membrane oxygenator is a device used to add oxygen to, and remove carbon dioxide from the blood. It can be used in two principal modes: to imitate the function of the lungs in cardiopulmonary bypass (CPB), and to oxygenate blood in longer term life support, termed extracorporeal membrane oxygenation, ECMO. A membrane oxygenator consists of a thin gas permeable membrane separating the blood and gas flows in the CPB circuit; oxygen diffuses from the gas side into the blood, and carbon dioxide diffuses from the blood into the gas for disposal.

SCOPE OF THE REPORT:

This report focuses on the Membrane Oxygenator in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Membrane Oxygenators are mainly produced in East China with 57.23% of the production market in 2015. East China and South China produced more than 80% Membrane Oxygenators total. In terms of consumption, South China and East China are the largest regions which account for nearly 60% of the market.

Medos is the largest player in China with 35.01% of the revenue market in 2015. Kewe and Sorin are also large players with 29.18% and 14.17% respectively. Other big players in China are Wego, Xijian Medical, etc.

In terms of technology, there is plenty room for improvement. The current market was mainly occupied by the existing enterprises, under the premise of the future demand growth and technological processes, the new entrants into the Membrane Oxygenator industry business should be able to occupy a certain market share.
