Abstracts

Metal 3D printer, also called metal additive manufacturing, can produce metallic products through three - dimensional and printing technology. Now it is widely used in automotive industry, aerospace industry and medical industry. Metal 3D printer works by laying down metal powder. A high powered laser then melts that powder in certain precise locations based on a CAD file. Once one layer is melted, the printer will place another layer of metal powder on top, and the process repeats until an entire object is fabricated.

SCOPE OF THE REPORT:

This report focuses on the Metal 3D Printer in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. The demand for metal products made by 3D printing is expanding in industrial market. And the metal 3D printer?s market is currently by a handful of companies that own the core technologies, including EOS GmbH, Concept Laser GmbH, SLM etc. Despite the growth of 3D of metals, we don't expect to see this growth create market pressure for cosumer 3D metal printers. At least, it is not in the short term.

The worldwide market for Metal 3D Printer is expected to grow at a CAGR of roughly 13.6% over the next five years, will reach 1730 million US\$ in 2023, from 800 million US\$ in 2017, according to a new GIR (Global Info Research) study.
