Abstracts

Metallocene Polyethylene is prepared by means of metallocene catalysts, usually including copolymers. Metallocene polyethylene has a relatively narrow molecular weight distribution, exceptionally high toughness, excellent optical properties and a uniform comonomer content. Because of the narrow molecular weight distribution it behaves less pseudoplastic (especially under larger shear rates). Metallocene polyethylene has a low proportion of low molecular weight (extractable) components and a low welding and sealing temperature.

SCOPE OF THE REPORT:

This report focuses on the Metallocene Polyethylene in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Metallocene polyethylene mainly has three types, which include mLLDPE, mHDPE, mLDPE and other types. And each type has application industries relatively. With growth of packaging market, the downstream application industries will need more metallocene polyethylene. So, metallocene polyethylene has a huge market potential in the future.

We tend to believe this industry is a rising industry, and the consumption increasing degree will show a smooth growth curve. And the price presents decreasing trend according to the economy development status and international competition. Also, there is fluctuation in gross margin.

The worldwide market for Metallocene Polyethylene is expected to grow at a CAGR of roughly 1.2% over the next five years, will reach 21900 million US\$ in 2023, from 20400

million US\$ in 2017, according to a new GIR (Global Info Research) study.
